

FRONTLINE NEUROPATHY

IF YOU HAVE

Diabetic neuropathy
Chemotherapy neuropathy
Idiopathic neuropathy
Diabetes / Prediabetes

WHAT YOU NEED TO KNOW

The most common complication of diabetes is nerve damage (neuropathy), which affects at least 50% of people with diabetes in Canada. The symptoms of neuropathy include pain, numbness and tingling in the hands and feet. Currently there are no drug therapies to stop or reverse neuropathy.

FRONTLINE NEUROPATHY SUPPLEMENT

Frontline Neuropathy is a clinical grade omega-3 commercialized from Dr. Lewis' ground-breaking clinical trial that showed 30% nerve regeneration in patients with diabetes over 1-year. Frontline Neuropathy works by helping to feed damaged nerves back to health.

Neuropathy often causes weakness, numbness and pain, starting in the hands and feet. When diabetes or toxins cause peripheral neuropathy, the nerve damage can progress over time to affect other areas of your body including the heart. Frontline Neuropathy is the first natural nutrition therapy that can support the health of people with neuropathy.

PRODUCT FEATURES

- It provides all three pro-nerve omega-3s (EPA, DPA and DHA) for the maintenance and regeneration of nerves
- Can be used therapeutically and preventatively
- Can be used alone or in combination with healthcare provider treatment
- Pleasant lemon flavour
- Health Canada NPN, GMP, HACCP, ISO 9001.
